

Stop rebuilding complexity. Get a hard baseline and pragmatic roadmap.

The reality check: where Clean Core falls apart

Flying blind

No baseline, no ownership for cleanup. You can't build a business case or track progress.

Architecture chaos

No solid integration architecture. Distributed systems become distributed chaos.

Governance fails

Architecture says no, but exceptions get approved. When deadlines hit, standards erode.

What makes this different

Reality-based assessment

We assess readiness beyond compliance, where governance truly fails.

Business impact focus

We translate technical debt into speed, reliability, and agility. Clear story for management and teams.

Actionable plan

Prioritized based on business impact, technical risk and change capacity. No theory, only practical steps.

What you get

Objective baseline

Clear view of your current maturity, quantified gaps, and concrete levers for improvement.

Quantified gaps

Current state with concrete improvement levers and clear business rationale for change.

Pragmatic roadmap

Prioritized actions, resources and realistic timelines based on business impact and change capacity.

Objective baseline

Baseline that reduces migration complexity and prevents legacy problems from returning.

Post-S/4HANA

Already on S/4 but upgrades are painful? Fast-track to sustainable Clean Core discipline.

Start for € 8,250.00 (Excl. VAT)

Stop fighting the same battles. Build organizational readiness that sticks.
